Our comprehensive mould assessments stand out from the rest as we bring together the skills and experience of Building and Construction, IICRC certification and Environmental Science to provide you with reports that are practical and easy to understand, yet scientifically robust.

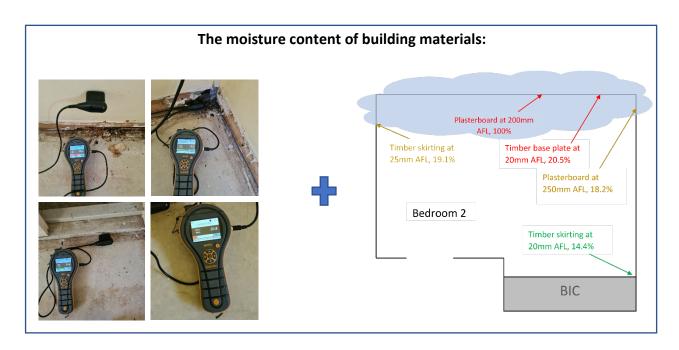

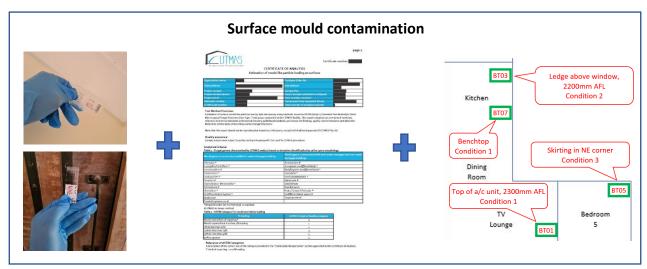

CAPABILITY STATEMENT

Mould Assessments and Post Remediation Verification

Traditional mould assessment reports are filled with appendices of photographs and laboratory results. The information that you are looking for may be in there somewhere, but who has time to wade through pages and pages to find it?

Our reports record the evidence from our site visit, but we go one step further and show what it means for our Client and their remediation contractors (see examples below).

Our reports are structured to support the detailed remediation Scope of Works that we provide. This greatly assists the Remediation Contractor and helps prevent unnecessary or missed works and further delays/costs to the project.

Manatech provides advice and guidance to the Restoration Contractor during the remediation phase, to minimise the cost and disruption of re-work from failed Post Remediation Verifications. We maintain our independence and insist on high clearance standards, but wherever possible will look to educate and assist our Industry.
